PROFESSIONAL SUMMARY

DevOps and software engineer with hands-on experience across CI/CD, cloud infrastructure, and application development. At IFS R&D International I work in the Cloud Infrastructure team, supporting enterprise environments with GitLab CI/CD pipelines, Bitbucket, Azure, Docker, Kubernetes, Terraform, and Chef, and I co-founded DriftCodes, where I own the architecture, delivery, and CI/CD-driven deployment of web and mobile applications for clients. I also build software in Python, Java, C#, and Swift, from a JWT-secured FastAPI telemetry API to a native iOS sign-language app using Vision and Core ML. I work methodically, troubleshooting from logs to root cause and automating repeatable tasks. Following a BSc (Hons) in Computing at Coventry University, currently maintaining a 1st class.

TECHNICAL SKILLS

CI/CD & Source Control: GitLab CI/CD pipelines, Bitbucket, Git, GitHub, GitLab

Cloud & Deployment: Azure, Vercel

Infrastructure as Code & Config Management: Terraform, Chef

Containers & Orchestration: Docker, Kubernetes

Linux & Scripting: Linux system administration, Bash / Shell scripting

Languages: Python, Java, C#, Swift, JavaScript, SQL

Backend & APIs: FastAPI, Spring Boot, REST API design, JWT authentication, OpenAPI / Swagger, SQLAlchemy, Node.js

Mobile & Frontend: SwiftUI, Core ML, Android (Java), React

Databases: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Firebase (Firestore, Realtime Database)

PROFESSIONAL EXPERIENCE

Co-Founder & DevOps Engineer

May 2026 – Present

DriftCodes · Sri Lanka

- Own the delivery pipeline end to end for client web and mobile applications, from architecture and build through CI/CD-driven deployment and release.
- Design, develop, and deploy cross-platform web and mobile applications, owning the architecture and the delivery process behind each release.
- Participate in code reviews, debugging, and testing ahead of deployment to uphold code quality and engineering standards.
- Work directly with clients and stakeholders to gather requirements and translate business needs into technical solutions and delivery plans.

Undergraduate Trainee Software Engineer — Cloud Infrastructure

May 2025 – Present

IFS R&D International (Pvt) Ltd · Sri Lanka

- Work on GitLab CI/CD pipelines and Bitbucket-hosted source control within the Cloud Infrastructure team, supporting automated build, deployment, and release workflows for IFS Cloud, Apps10, and IFS Remote environments.
- Support and maintain Azure-based environments across development and testing stages, collaborating daily with development, QA, and platform teams to keep deployments stable and repeatable.
- Diagnose pipeline, deployment, and configuration failures through monitoring and log-based root-cause analysis, resolving issues across infrastructure and environment layers and escalating with clear detail where needed.
- Automate infrastructure provisioning and configuration management using Terraform and Chef, and script routine operational tasks in Bash, improving deployment consistency and reducing repeat manual effort.
- Administer Linux systems and containerized workloads with Docker and Kubernetes, including environment setup and day-to-day system administration for enterprise deployments.
- Investigate and resolve customer-reported technical issues end to end, reproducing the problem, isolating whether it is infrastructure, configuration, or environment related, and delivering a fix or a clear escalation.

PROJECTS

Real-Time Solar Generation Data API GitHub

A RESTful API for ingesting and serving solar telemetry for Sri Lanka Sustainable Energy Authority

- Designed and deployed a RESTful API that ingests and serves 15-minute solar telemetry, modelled as an append-only time series.
- Implemented JWT security that separates write and read access.
- Built pagination, filtering, sorting, conditional GET and a uniform error format.

Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, JWT, OpenAPI/Swagger, Postman, Vercel

SignSpeak — iOS App for Learning and Communicating in ASL GitHub

Native iOS app (Swift, SwiftUI, MVVM, dependency injection) for learning ASL and communicating in real time.

- Built a live sign-recognition pipeline using Apple's Vision framework for hand-pose detection, paired with two custom Core ML classifiers, one for static signs (letters) and one for motion-based signs, arbitrated into a single recognition service.
- Implemented a two-way communicator combining on-device speech recognition and speech synthesis so a signing user and a speaking user can converse in real time.
- Built a learning system and searchable sign directory, with Firebase sign-in, a biometric app lock, and a Swift Testing suite covering core logic.

Stack: Swift, SwiftUI, Vision, Core ML / Create ML, AVFoundation, Firebase (Auth, Firestore), Swift Testing

Online Freelancing Web Application (WorkWave) GitHub

Freelance services marketplace connecting clients with skilled freelancers for digital service exchange.

- Built backend REST APIs with Java and Spring Boot covering service listings, transactions, and user accounts, serving the React front end.
- Designed the MySQL relational schema behind users, services, and transaction records.
- Contributed to secure transaction handling and real-time service information, making it easy for clients to buy and freelancers to sell digital services.

Stack: React, Java (Spring Boot), MySQL, IntelliJ IDEA

Smart Donation Mobile Application GitHub

Android app connecting donors and recipients for food, clothing, and essential-item donations.

- Designed and built the app end to end in Java with Android Studio as an individual project.
- Integrated the Google Maps API for location tracking.
- Used Firebase Realtime Database for real-time data, keeping donation listings and status updates in sync across devices.

Stack: Java (Android), Firebase Realtime Database, Google Maps API, Android Studio

EDUCATION

BSc (Hons) in Computing — Expected 2027 Jan
Coventry University, UK

Higher National Diploma in Software Engineering — May 2024 – May 2025
National Institute of Business Management · GPA 3.8

Diploma in Software Engineering — Mar 2023 – Apr 2024
National Institute of Business Management · GPA 3.9

CERTIFICATIONS

- Database Design and Database Foundations — Oracle
- Postman API Fundamentals
- Python for Beginners — Microsoft
